

Architecture Diagrams Gallery

Table of Contents

1. Repository Layout	1
2. HTML and Navigation	2
3. CSS and Theming	2
4. SEO, Privacy, and Deployment	4
5. Sources and Regeneration	5

This gallery brings all architecture diagrams into one place. Each diagram is maintained as PlantUML ([docs/diagrams/.puml](#)) and rendered to PNG ([docs/images/.png](#)). See [BUILD.adoc](#) for how to regenerate them. == Thumbnail index

Click a thumbnail to jump to the full-size diagram below.

1. Repository Layout

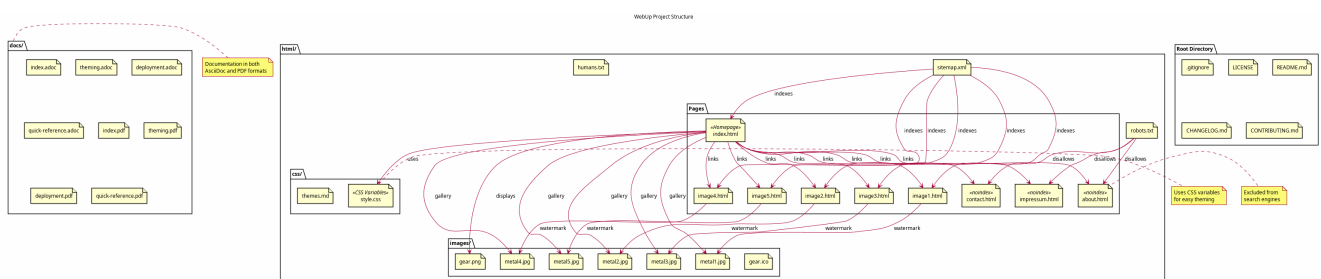

Figure 1. Project Structure

Explains top-level files and the split between documentation ([docs/](#)) and website assets ([html/](#)).

2. HTML and Navigation

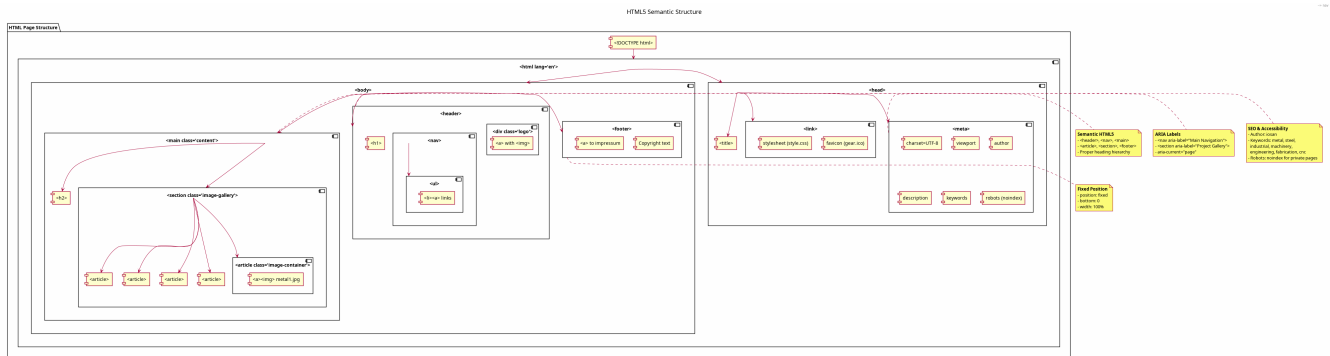

Figure 2. Semantic HTML Skeleton

Shared, accessible page structure: header → main → footer.

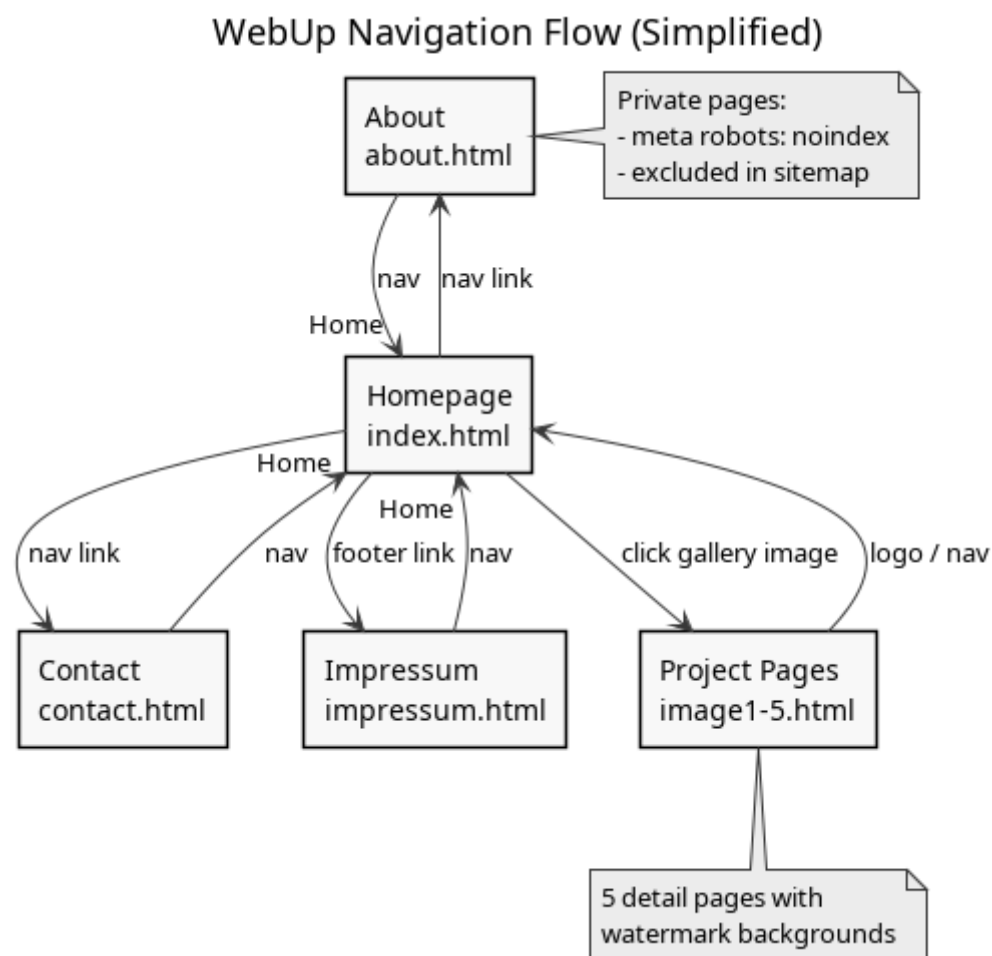

Figure 3. Navigation Flow

Shows how users move from the homepage gallery to detail pages; private pages remain accessible but excluded from search.

3. CSS and Theming

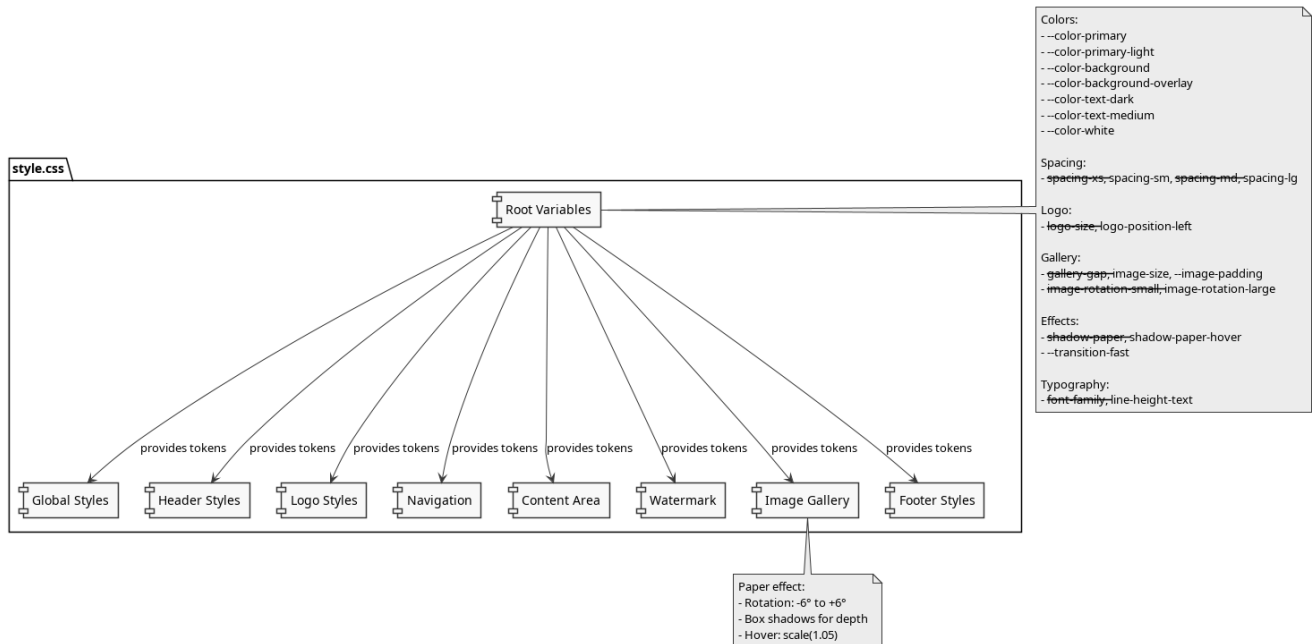

Figure 4. CSS Architecture

Design tokens in :root feed each style layer for consistency and easy theme switching.

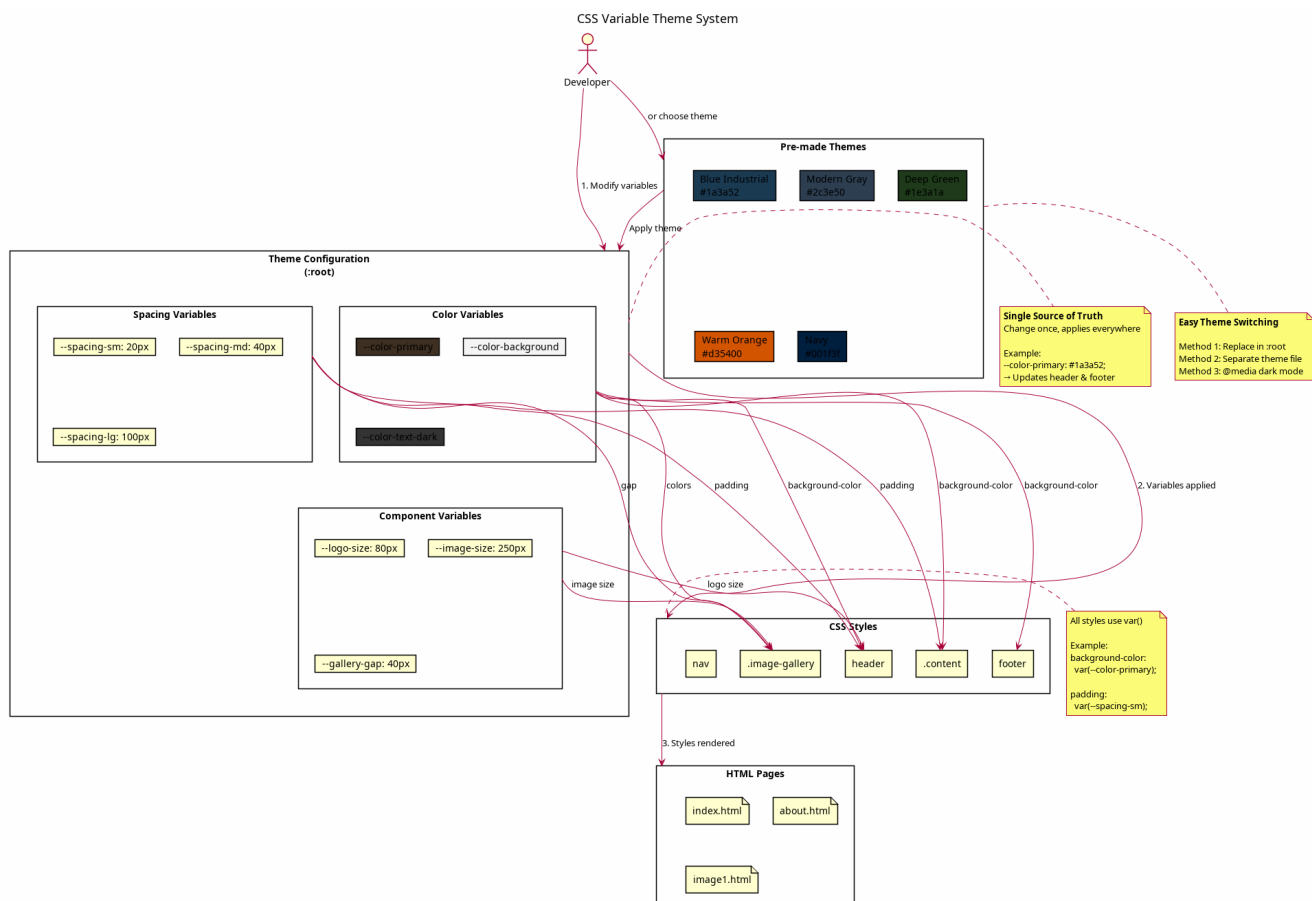

Figure 5. Theme System

Demonstrates how alternative color palettes can be applied via custom properties without changing structure.

4. SEO, Privacy, and Deployment

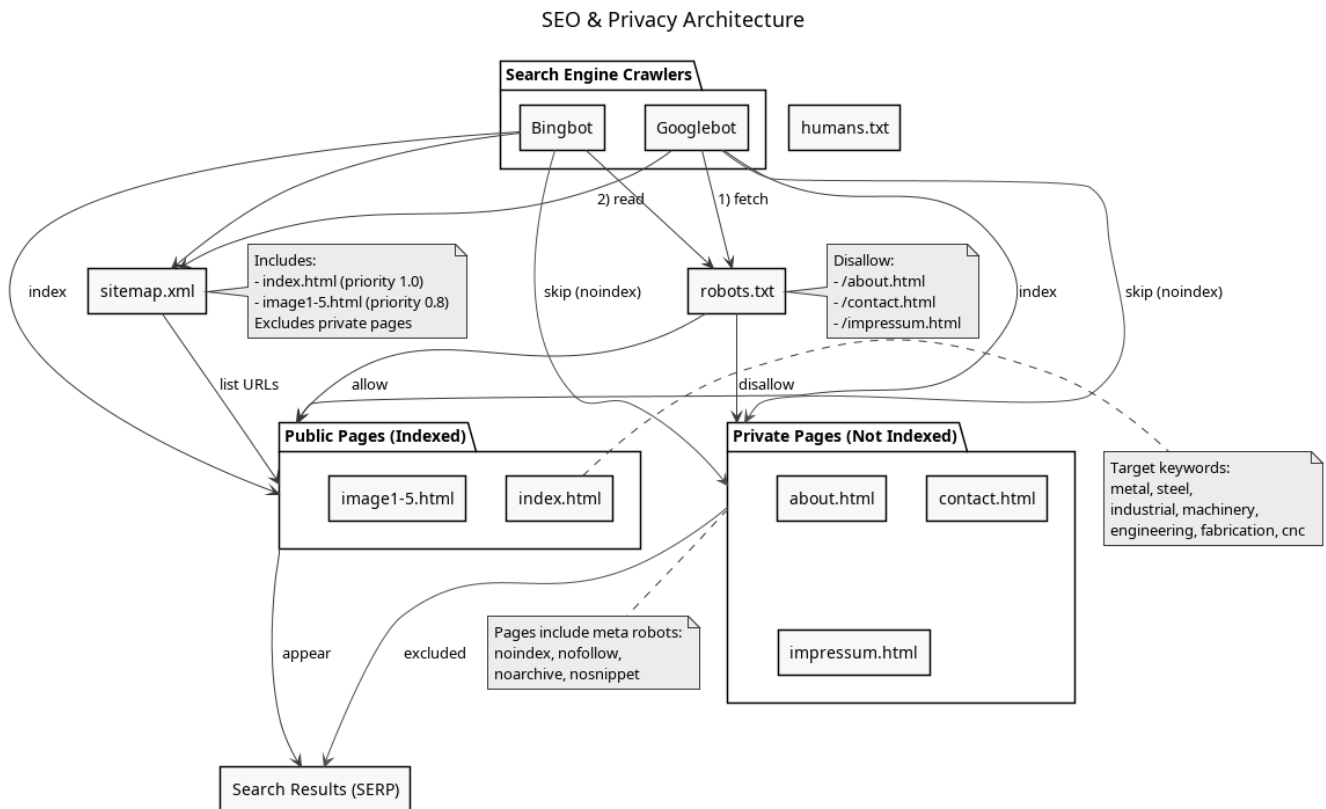

Figure 6. SEO & Privacy Architecture

Combines meta robots directives, robots.txt, and sitemap.xml to control search engine visibility.

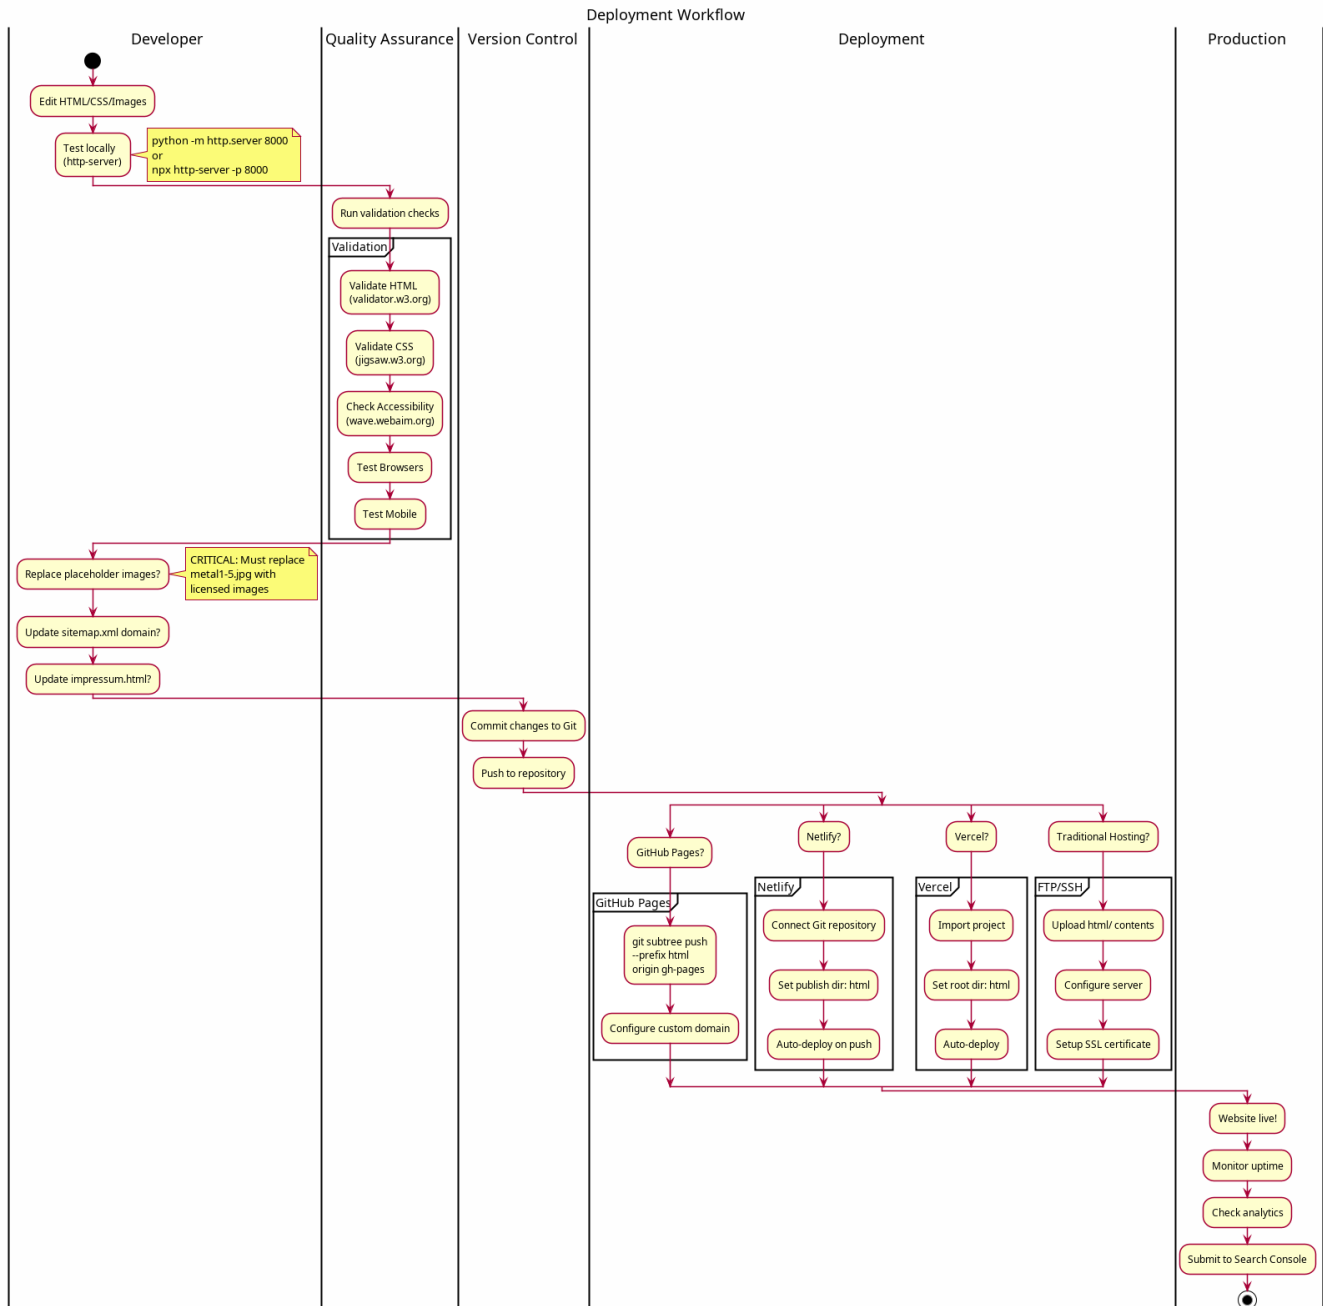

Figure 7. Deployment Workflow

From local authoring to CDN delivery across common static hosting platforms.

5. Sources and Regeneration

All diagrams are maintained as PlantUML:

- Sources: `docs/diagrams/*.puml`
- Rendered images: `docs/images/*.png`

Regenerate with either local tools or Docker. From the project root:

- Local: `make diagrams`
- Docker: `make docker-diagrams`

To include diagrams in PDFs or HTML versions of the docs, ensure `:imagesdir: images` is set (as in this file).
